

## Addenda to the study entitled “Preliminary Synonymical and Distributional Checklist of African Lepidoptera published recently in *Cent. Ent. Stud., Memoirs* 5: 1-975”

(Part I)

Ahmet Ömer Koçak    Muhabbet Kemal

**Abstract:** Addenda to the study entitled “Preliminary Synonymical and Distributional Checklist of African Lepidoptera” published recently in *Cent. Ent. Stud., Memoirs* 5: 1-975 (Part I). *Cesa News* 80: 1-9.

This paper reflects process of a project work of the Cesa. Additional species of two families, *Sesiidae* and *Drepanidae* to preliminary list of African *Lepidoptera* published recently, are given in alphabetical order with synonymous names and distributional codes. Total number of the African species rises to 19437.

**Key words:** *Lepidoptera*, *Sesiidae*, *Drepanidae*, checklist, fauna, Africa.

Within the Cesa project entitled “*Entomofauna of the Old World*”, a preliminary synonymical and distributional checklist on African *Lepidoptera* has been recently published (Koçak & Kemal, 2012). The list was based upon the fauna of 53 states of Africa, arranged in the database program of the Cesa.<sup>1</sup> Totally 19200 species of 86 families were listed alphabetically with synonyms and distributional information. Of course, the weak side of the published list is very incomplete, but it appears very important, as it is the most comprehensive work on this subject at the present time. The details of this big picture will look better in future by contributions of the necessary studies, if they can be obtained in time.

Below, new information of the two families, *Sesiidae* and *Drepanidae* are added to the publication mentioned above as specific lists with the synonymous names and codes of the distribution (Pühringer & Kallies, 2004 et seq.; Watson, 1965). Thus, total number of the African species rises to 19437.

<sup>1</sup> <http://www.cesa-tr.org/Infos.htm>

Most of the species of African sesiids were described by British taxonomists (126 species). French are in second place (68 species). Hampson described 63 valid African species; Le Cerf and Meyrick were in second and third places with 47 and 34, respectively. As to the patronyms, among the African sesiids 34 taxa were named after various personal names. In African Lepidoptera, 3034 patronyms were recorded in our database (See also Koçak & Kemal, 2008).

### Family Sesiidae

- Aenigmina aenea** Le Cerf, 1912 Synonym(s): *aenea* Le Cerf, 1912 **AET<sup>2</sup>**
